## Year 6 Handwriting appropriate to the task

Copy the passage in your normal handwriting, then label the diagram

The start of a river is called the source. The source comes from a lake or spring. Small streams flow downhill and join other streams. These are called tributaries. A confluence is where a stream joins the main river.

On flatter ground, the river slows down and starts meandering. When rivers reach the sea, they often open out and flow more slowly. This part of the river is called the estuary. The mouth of the river is where it meets the sea.
